

Visiting Instrument Program

The Gemini Visiting Instrument Program provides opportunities for teams to bring non-facility instruments and adaptive optics capabilities to one or both of the Gemini telescopes. This program also supports the use of these instruments by the Gemini community through the normal time allocation process. From diffraction-limited optical imaging, to high resolution spectrography to precision polarization measurements, a diverse suite of capabilities can always be found in the Gemini Call for Proposals.

For more information on the Visiting Instrument Program, check out:
