Kitt Peak Visitor Center

The Kitt Peak Visitor Center strives to inspire a sense of wonder and awe about the Universe through exhibits, tours and public programs.

We inform and educate the public about basic astronomy, current research and the scientific process, along with how Kitt Peak National Observatory, the National Optical Astronomy Observatory (NOAO), its parent organization, the Association for Universities for Research in Astronomy (AURA) and the National Science Foundation (NSF) play major roles in US astronomical research.

Founded in 1958 as the US national observatory, Kitt Peak National Observatory has been a world-famous center for astronomical research for nearly 60 years. Nestled on top of Kitt Peak in the Quinlan Mountains on the Tohono O'odham Nation, the Observatory is home to more than 25 telescopes used for research and public outreach.

The Kitt Peak Visitor Center has been conducting public programs ever since it was built in 1964. The Visitor Center is the hub for public access to the mountain. From exhibits to special events and programs to nightly stargazing, the Visitor Center brings you closer to the amazing world of astronomy.

The membership program is managed by the Visitor Center.

Kitt Peak National Observatory is part of the National Optical Astronomy Observatory and operated by the Association of Universities for Research in Astronomy, under a cooperative agreement with the National Science Foundation.
