Command Protocol.

The SOAR TCS accepts commands from other applications through a TCP/IP port. The commands are ASCII strings, that request data or an action to be performed on behalf of the requestor. The general structure of a command consists of a keyword , followed by an optional action word and parameters.

The TCS response to a command is also an ASCII string, whose first token is one of DONE, ACTIVE or ERROR. Following this first token is a list of optional data depending on the command that was invoked.

Command

FOCUS (INIT | MOVEABS | MOVEREL | STATUS | STOP)

This command requests actions to the focus mechanism associated with the secondary mirror (M2).

INIT

Initializes the focus and leave the device in the fiducial position

MOVEABS value

Moves the focus to an absolute position given by the value in microns.

MOVEREL +/- value

Moves the focus a certain value in microns from the present position.

STATUS

Return the status of the motion (if any) and the present focus position.

STOP

Stop the focus motion.

For example:

```
FOCUS STATUS  
DONE 5300  
FOCUS MOVEABS 5500  
ACTIVE 5300  
FOCUS STATUS  
ACTIVE 5450  
FOCUS STATUS  
DONE 5500
```

GUIDER (DISABLE | ENABLE | STATUS)

This command enable or disable the guider device.

For example:

```
GUIDER ENABLE  
DONE ENABLE  
GUIDER STATUS  
DONE ENABLE
```

INFO

This command returns a long list of parameters, as follows:

```
date  
time  
right ascension  
declination  
hour angle  
azimuth  
elevation  
rotator angle  
dome azimuth  
dome elevation  
airmass
```

For example:

```
INFO  
DONE 2002-04-15 17:06:52 05:52:53.81 -52:14:46.54 -03:54:13.05 136.34 42.31 274.64 136.34 42.31 1.484
```

OFFSET (MOVE | STATUS)

This command send an offset motion request to the TCS. The offset is given in units of arcseconds, and must be preceded by one of the direction characters N, S, E, W.

For example:

```
OFFSET MOVE E 34.3 N 56.7  
ACTIVE 54.797746 56.700000  
OFFSET STATUS  
ACTIVE 10.345630 12.543600  
OFFSET STATUS  
DONE
```

WAY

(Who are you) This command returns an identification string.

For example:

```
WAY  
DONE SOAR 4.2M
```
